

ENHANCED SAFETY KIT FOR OFFSHORE CAPSULES

SURVIVAL
SYSTEMS
INTERNATIONAL

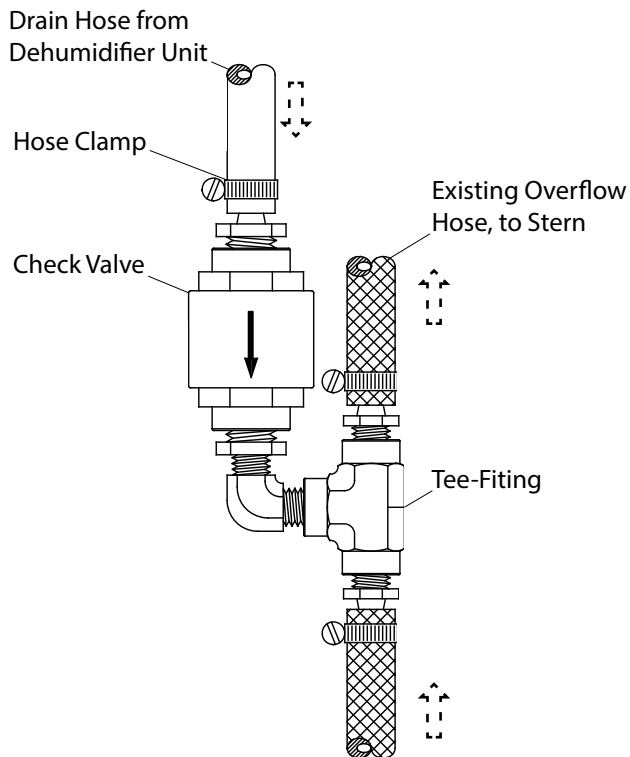

ADDED FEATURES - DESIGNED FOR YOUR CAPSULE - OEM CERTIFIED COMPONENTS - INSTALLED ONSITE - ADDED SAFETY

DEHUMIDIFIER KIT

MODELS: Currently available for all SSI Capsules models

SAFETY BENEFITS: Recommended for customers that have capsules in humid environments. This dehumidifier controls moisture within the capsule with its internal evaporator and discharge drain. Capsule requires a "Power Feed Through Unit" to provide the required 120V AC power.

Controlled humidity results in improved real-world conditions to support more functional actual evacuation, maintenance and training operations within the capsule. The dehumidifier is designed to remain ON and at maximum operation, 24 hours a day, 7 days a week. Custom mounting and drainage systems from SSI provide a safe and proven means to add this kit to any SSI Capsule.

Components Include:

- Dehumidifier Unit
- Mounting brackets (specific to capsule model)
- Drainage assembly
- Pre-assembled power cord, with protected/ hooded plug end

WHAT ARE ESK's?

ESK's are SSI's engineered packages of additional components (or modified components) to "add-on" to your existing SSI offshore capsule. The goal of these kits is to offer additional functionality, ease of operation and ultimately added safety to your Survival Systems International Capsule. Since SSI is the OEM of your lifeboat (capsule), as well as the designer and manufacturer of these Enhanced Safety Kits, the installation process is seamless and cost effective.
